

Performance Nitro Black Race Rings (43SN8000 series) *by Engine Pro*

Engine Pro's new black nitrided race rings have features only found in very expensive advanced race rings at value pricing. The super smooth nitrided surfaces lower parasitic drag and provide extreme sealing capabilities. The stainless steel composition lets NITRO Black rings maintain their original tension much longer than cast rings.

- Two top rings and oil rails are made of black, gas nitride hardened stainless steel
- Faces of top ring and oil rails are ceramic PVD coated and have a very low coefficient of friction for superior scuff and heat resistance and excellent seating
- Second ring Napier design for optimum durability and oil scraping ability under the most severe performance conditions
- Gas nitride and ceramic PVD are completely compatible with all fuels, injections and Nikasil coated cylinder bores

NITRO Black rings have been dyno tested to measurably improve horsepower.

NITRO BLACK

NITRIDED HIGH PERFORMANCE RINGS

ENGINE PRO PERFORMANCE PRODUCTS

The Engine Pro Performance product line includes a broad array of performance products designed and engineered to exceed your customers' expectations. Our products are manufactured to exacting standards using state-of-the-art technology and processes to ensure reliable performance and great value. The Engine Pro Performance product line provides a wide variety of choices, accommodating the varied performance needs and budgets of your customers from the budget minded enthusiast to the all-out racer. Engine Pro is committed to being a leader in performance engine parts, and we thank you for your support. When it comes to performance, you will find it pays to know a pro... Engine Pro.
